Website: www.tcarprograms.com

Target Audience

This course provides acute care, critical care, and perioperative nurses the foundational, evidence-based information and critical thinking skills necessary to care for the hospitalized trauma patient. TCAR covers a wide range of pathophysiologic and nursing concepts and is designed to be a broad, core-level program, rather than an advanced or specialty area specific course. For those involved in the care of injured children, consider attending PCAR (Pediatric After Resuscitation), the peds-specific version of the TCAR course.

Course Content

Part 1 An introduction to basic topics relevant to the nursing care of the hospitalized trauma patient:

- The trauma care spectrum
- The biomechanics of trauma
- The body's response to injury

Part 2 Learners participate in interactive expanding case scenarios that address the care of hospitalized patients with injuries to specific body systems. Each module introduces specific trauma care concepts including pathophysiology, assessment modalities, and complications. Surgical, medical, and nursing management options and outcome criteria are introduced while analyzing patients with:

- Thoracic trauma
- Abdominal trauma
- Musculoskeletal trauma
- Craniocerebral trauma
- Spine & spinal cord trauma
